It's amazing how so much rides on something so small

12mm cornea

It's only 12mm in diameter. But the cornea is everything to us.

At Trukera, we're committed to working with you to make big advances in corneal health.

The History of Trukera Medical

2009

TearLab, founded in 2009, was built upon the recognition of the importance of corneal health to eye care practice.

2010

The launch of the TearLab Osmolarity System in 2010 represented the introduction of an innovative diagnostic tool into the eye care market to deliver the first objective osmolarity assessment.

2019

American Society of Cataract and Refractive Surgery identified osmolarity testing as an essential preoperative diagnostic test.

2022

TearLab was renamed Trukera Medical to reflect our expanded vision to tackle additional unmet medical needs throughout eye care.

The launch of ScoutPro: the osmolarity system that is portable, practical, and precise.

12mm cornea

What began with a focus on osmolarity testing is now transforming into a comprehensive corneal health company focused on addressing unmet medical needs for our ophthalmology and optometry customers.

As Trukera Medical, it is our vision to be the world's leading and most trusted corneal health company for providers and patients.
